

Cathedral of the Nativity of the Virgin Mary in Veliko Târnovo

Descriere

The church is located in the old town center of Veliko Târnovo, at the foot of the fortress Tareveţ, in the Boierilor district, near the Metropolitan building of Veliko Târnovo. On the foundations of an older church, the craftsman Kolio Ficeto builds the present church, between 1842-1848, made of carved sandy sandstone and red brick, with cornices and double arches. It is unique due to the four columns, the ellipsoidal windows, and the three naves and two rows of capitals inside. The bell tower on the western wall is also built by Kolio Ficeto. The church was destroyed in the earthquake of 1913, being rebuilt in 1934, following the plans of Master Grozo. The wood carvings are by Peter Kuslev, from the Debar School, and the royal portal carved in oak is elaborated by prof. Travniţki. The painting is done by prof. Kojuharov, Peter Seferov, Atanas Veleb and D. Ghidjenov.
